

Clear All Event Logs Help Guide

About:

Clear All Event Logs Version 1.0.0

Copyright (c) 2016-2023 by Mark L. Alberi. All rights reserved.

Clear All Event Logs is a Microsoft legacy BATCH file transposed as powershell and developed into a full VB2022.net IT executable standalone application & is not licensed for remote distribution of any kind. Once licensed as remote IT, .net API's can be developed and deployed as a LAN server distributable. It calls the system32 wevtutil utility and clears all event viewer logs, displaying the results in the powershell command console. The wevtutil "enables you to retrieve information about event logs and publishers, install and uninstall event manifests, run queries, and export, archive, and clear logs."

There are no instructions on how to use it. Just confirm you would want to clear all event viewer logs.

Controls:

See Image1, Clear All Event Logs GUI Interface.

About:

Gives an application summary about description.

Help:

There are three toolbar pull downs; Website, Local & License.

Website:
